THE PIVOT (ver.2)

==========

At the Roulette Table, write down all the outcoming numbers until you get a repeat.
This si your PIVOT Number.

Example: 5 20 18 36 31 27 8 1 31

31 is the first repeat and is the PIVOT number and will remain the PIVOT number until we strike out 36 spins in a row.

Here are the Rules:

Level 1. Bet 1 time	1 Unit on	High or Low
Level 2. Bet 1 time	1 Unit on	Dozen
Level 3. Bet 3 times	1 Unit on	6-Number Combination
Level 4. Bet 6 times	1 Unit on	3-Number Combination
Level 5. Bet 6 times	1 Unit on	2-Number Combination
Level 6. Bet 19 times	1 Unit on	The Pivot Number

We have six levels.

We start at level 1:
If we win, we go back to the first level.
If we lose, we move to the next level.

We continue until we lose all six levels.

Level 2:
We bet the Dozen the PIVOT Number is in.

Level 3:
We bet the 6-Number combination, our PIVOT plus the next 5 numbers
(always use the PIVOT number as the LOWEST value in the combination whenever possible)

Level 4:
We bet the 3-Number Combination, 31 and the next two numbers.

Level 5:
We bet the 2-Number Combination, the split 31 & 32.

Level 6:
We bet the PIVOT Number.

Remember, any win along the way up the levels returns us back to LEVEL 1.

If we strike out on ALL SIX LEVELS, (36 spins in a row), we look for a
NEW PIVOT NUMBER.

Level Payouts:

Level 1 pays 1 to 1
Level 2 pays 2 to 1
Level 3 pays 5 to 1
Level 4 pays 11 to 1
Level 5 pays 17 to 1
Level 6 pays 35 to 1

Remember you only lose if you strike out at all six levels, and you only lose 36 units.

You should have a bank of 360 Units which is enough to cover 10 sessions.

Diagram for 6, 3 and 2 number combinations:

The Roulette Table is laid out like this: (Using a Single Zero Wheel)

```
  |3 |6 |9 |12|15|18|21|24|27|30|33|36|
0 |2 |5 |8 |11|14|17|20|23|26|29|32|35|
  |1 |4 |7 |10|13|16|19|22|25|28|31|34|
 | 1st Dozen | 2nd Dozen | 3rd Dozen |
 |  1-18  EVEN      |   ODD  19-36     |
```

6 Number Combinations

30|33
29|32
28|31

33|36
32|35
31|34

3 Number Combination

33
32
31

2 Number Combination

Always bet PIVOT and the number to the right unless you are unable to do so,
then bet left or above or below.

31|34
or

32|
31|

or

28|31

If 36 was the PIVOT Number, then the 2-Number Combination would be

33|36

or

36|
35|

What validity is there to this?

The fact is that numbers that come up tend to repeat. You'll find that on average, only about
24 numbers appear in 36 spins. Rarely if ever will all 36 numbers appear in 36 spins.

This means that on average, in 36 spins, you must have 12 repeats. These could be repeats of
12 numbers, but more likely a few numbers will come up three and even four times. This is not
theory but proven on hundreds of thousands of spins as well as computer generated spins and
is as mathematically sound as you can get.

This is what is called the theory of uneven distribution. In a short trial of 36 spins, not all will
appear but certainly over a trial os millions of spins, all the numbers will even out.
